

ELECTROLYTE™

Biovet Electrolyte™ is an electrolyte replacement product for addition to feed or drinking water of horses. When horses exercise they sweat, resulting in a significant loss of chemicals through the excretory process. Horses in moderate race training may lose up to 60 grams (2oz.) of salt in the form of sodium chloride as a result of sweating and an additional 35 grams (1oz.) of sodium chloride in the urine.

It has long been recognized that these horses need an adequate supply of replacement salt and many trainers and horse nutritionists have relied on free choice use of a salt block in the horse's stall for sodium chloride replacement. While this remedy is sufficient for some horses, the fact remains that not all horses with a salt deficiency will take salt from a block.

Biovet Electrolyte™ contains no prohibited substances and may be used during racing and competition.

BENEFITS:

Biovet Electrolyte™ contains calcium, magnesium, potassium and sodium and is totally soluble in a pail of water (16 ounces). The excellent palatability of Biovet Electrolyte™ is accomplished by the addition of Fructose-Dextrose and an orange flavoring. People tell us that the average horse, given the choice of a plain pail of water and a pail containing Biovet Electrolyte™, will 9 times out of 10 choose the Biovet Electrolyte™ pail.

Through the addition of Biovet Electrolyte™ to "cooling-out" water, lost fluids are replenished and with the fluid, a proper balance of electrolytes/salts is going back into the horse's system. The frequency of using Biovet Electrolyte™ is in direct ratio to how strenuously the horse works and how much he sweats. Generally speaking, this would be two or three times per week. In some cases, it may be advisable to add Biovet Electrolyte™ to drinking water of those horses that wash out and sweat excessively at a rate of one packet daily in their drinking pail.

GUARANTEED ANALYSIS:

Each single 75 gram packet contains:

Sodium Chloride	7,200 mg
Potassium Chloride	3,400 mg
Calcium Chloride920 mg
Magnesium Sulfate60 mg

NET CONTENTS.....2 ½ oz. (71 grams)

INGREDIENTS: Dextrose, Salt, Potassium Chloride, Magnesium Sulfate, Calcium Lactate, Silica, Orange Flavoring, FD&C Aluminum #6 Yellow Dye.

DIRECTIONS:

Dissolve 1 packet in the horse's water pail after racing, training, exercise, or as directed by your Veterinarian.

FOR EQUINE USE ONLY. KEEP OUT OF REACH OF CHILDREN.

TARGET USE:

- *Dehydration
- *Brood Mare
- *Equine in Heavy Competition
- *Endurance Building

PACKAGING:

30/1 OZ. PACKETS PER BUCKET; 4 BUCKETS/CASE.
90 oz / WITH 1 oz. MEASURE
450 oz / WITH 1 oz. MEASURE
