

MC HOOF+ZN™

Biovet MC Hoof + ZN™ is an oral vitamin and amino acid supplement that aids in promotion of hoof growth. It contains no prohibited substances and may be used during racing and competition.

BENEFITS:

Biovet MC Hoof + ZN™ is an oral preparation containing Methionine and Cystine in a highly palatable base. These amino acids are essential for the development of normal hoof growth. In addition to these essential amino acids, this product contains optimum levels of Biotin and Zinc to further enhance the effect of the Methionine and Cystine. It is indicated when hooves are cracking, splitting, crumbling or have a lower than normal rate of growth. Inadequate amounts of these amino acids may be due to poor quality feeds, or the inability of some horses to convert feed stuffs in adequate amounts to supply sufficient levels of Methionine and Cystine.

GUARANTEED ANALYSIS:

Each single 1oz.packet contains:

L-Cystine	5.0 Grams
DL-Methionine	5.0 Grams
Biotin	15.0 mg
Minimum Zinc	1950 PPM
