

THUNDER™

A vitamin, mineral and electrolyte supplement for performance horses – racing or in heavy training. No prohibitive substances are contained in this supplement so it may be used during racing and competition.

BENEFITS:

For horses that are racing or performing on a regular basis it is advisable to suggest the use of THUNDER™ which contains salts of calcium, sodium, magnesium, and potassium. These salts will provide daily replacement by ingestion and, when used in addition to those found in Biovet Electrolyte™ in “cooling-out water”, provides insurance that horses will not become dehydrated. It can be used as an aid in the treatment and prevention of avitaminosis in horses and as a source of essential minerals and electrolytes.

Additionally, the benefits of Vitamin E to the horse’s musculature and respiratory system are well documented through work done at Windfield’s Farm in Canada. These benefits include increased muscle mass and strength. The addition of Vitamin A, D, and B Complex factors further insures that dietary requirements are being met.

GUARANTEED ANALYSIS:

Each single 1 ounce packet contains:

Vitamin A	125,000 I.U.	Calcium.....	Minimum 0.3%
Vitamin D	10,000 I.U.		Maximum 0.32%
